

# Mike's Engine-Turned Floor Pans For the *Buttercup*

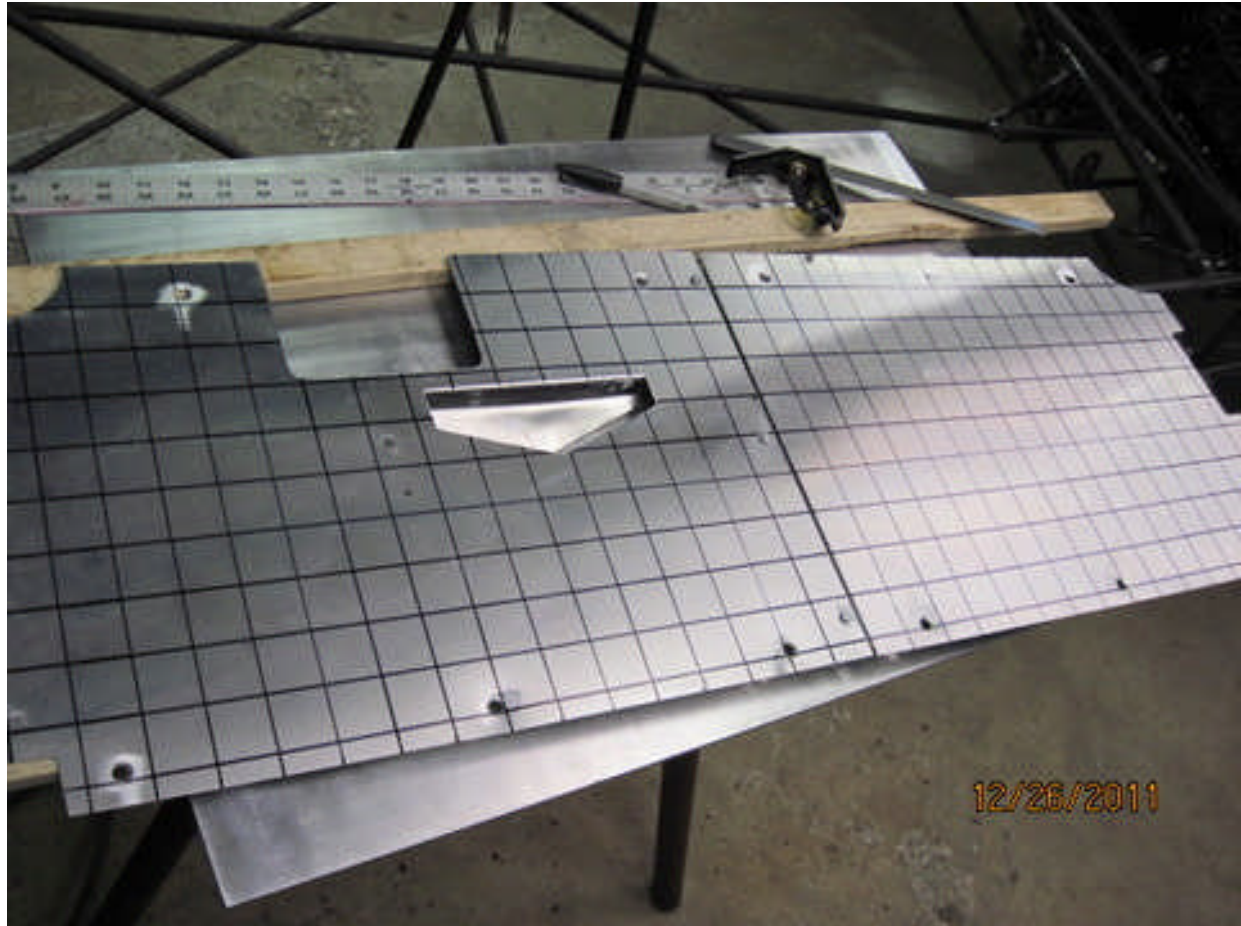

I'm putting the engine turning design on the Floor pans....

I took a few "Detail" pictures in case any of you want to try this on something...

Inserts holding both upper pans together....

Pieces have the grid pattern ( 1-1/8th sq )

The Scuff pad is 2"... I use an aluminum washer to help support the Scuff pad...  
It is dipped in the WD 40 and hitting the trigger... the excess fluid stays in the container

You can see the scuff pad "won't" wipe out lay-out lines you need...

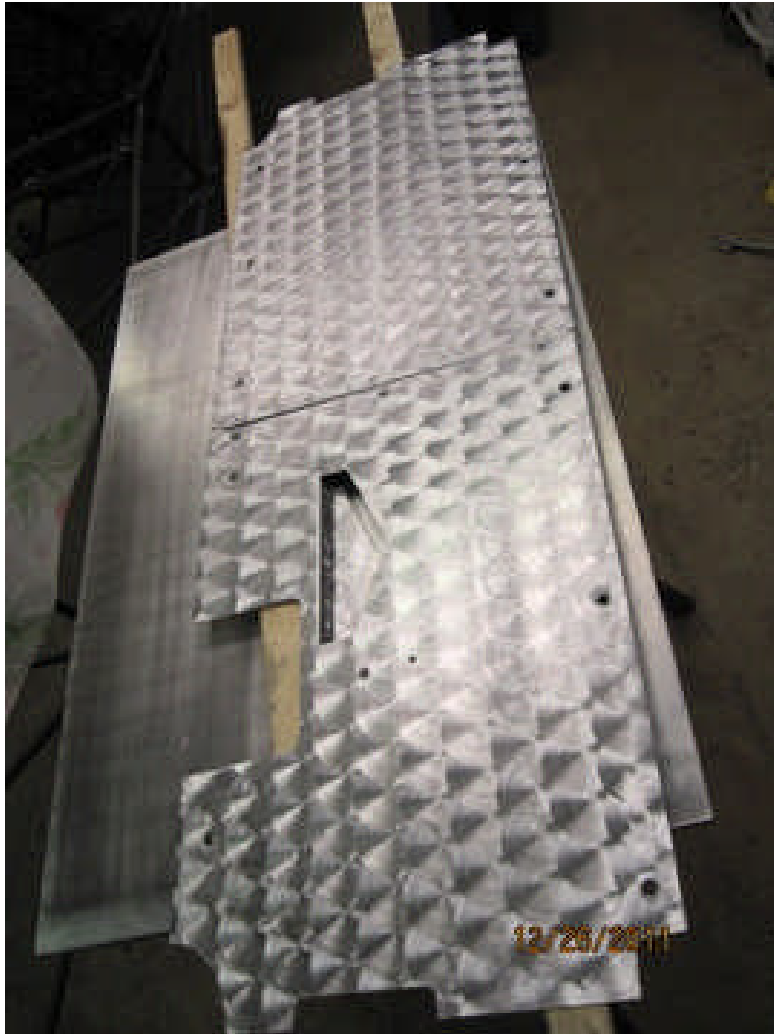

Dipping the scuff pad

The fluid gets full of Aluminum

I'm double checking the continuation of the pattern on the next floor pan

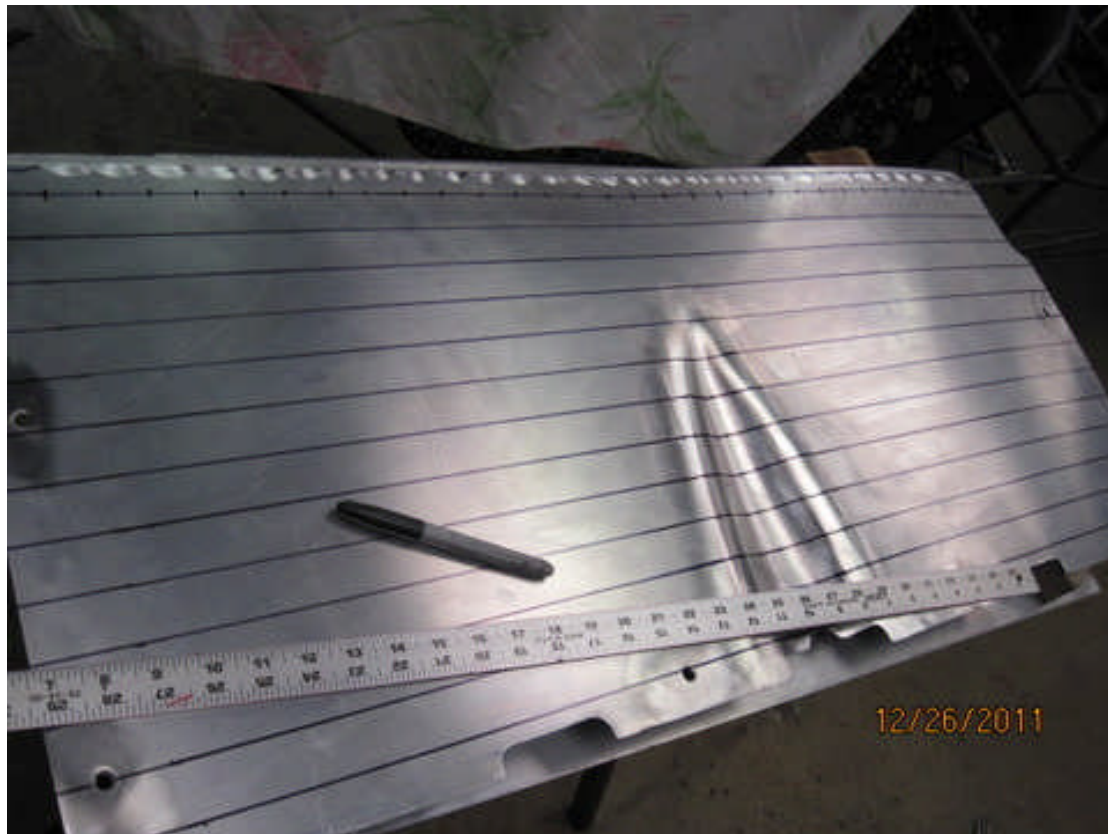

. The marks are made... also scuffed the upper partial set of swirls...

. Laying out the main Floor Pan , Still got more to do ( Tomorrow )

Finished product installed...
